

Isolators

Secure your containment
with the **flexibility of handling**

Unique performance

The flexible isolators of PIERCANTECH guarantee tight spaces of intervention with a controlled atmosphere. They can be connected to other containment devices and are interchangeable on new and existing installations.

Areas of application

UNIVERSITY – RESEARCH

NUCLEAR

FOOD

HEALTH – PHARMACEUTICAL

HEALTH – HOSPITAL

Approvals meeting the specifications of the health-pharmaceutical sector

THEY TRUSTED US...
They use PiercanTech insulators

Available options

They are available with or without structures and accessories

Materials

PVC PVC CRYSTAL PUR EBA/EVA

HEALTH - PHARMACEUTICAL

SOFT ISOLATOR

It is a **working enclosure** with flexible, transparent walls, which offers a **panoramic view** of the environment. Ideal when protecting against materials, sensitizers or chemical compounds is required it provides respiratory and skin protection. It corresponds to many needs in the field of «health-pharmaceutical» mainly but also in the «hospital-health» sectors and «University-research.»

OPTIONS

- Wide possibility of tailor-made
- Technical plastic sheets of quality, calendered and crystal to guarantee a good optical quality
- Waterproof closure possible

NUCLEAR SCIENTIFIC POLICE

INTERVENTION GLOVE BOX

It is a **flexible**, multifunctional **wall** isolator made of high quality engineered plastic films. Assembled **in minutes**, **mountable and removable** it can be used **anywhere**. **Transportable** and **lightweight**, it can meet many laboratory or field requirements in the field mainly in the «healthpharmaceutical» and «hospital-health» sectors.

OPTIONS

- Wide possibility of tailor-made
- Technical plastic sheets of quality, calendered and crystal to guarantee a good optical quality

Accessories for flexible isolator

The insulator accessories are made of colored or transparent technical plastic sheets, with or without support. They have good mechanical properties and are impervious to liquids and low concentration chemicals..

LIAISON BELLOW

HANDLING SLEEVE

"INTERNAL" CAP
with gasket

"EXTERNAL" CAP
without gasket

OUR STRONG POINTS

- + Quick and easy implementation
- + Effective barrier against pollutants and contaminants
- + Great flexibility in use and handling, compatible and adaptable to any installation
- + Compatible with cleaning agents and surface decontamination

From the study to the realized part of **the isolators**

From the start of your project, PiercanTech brings you the right solution, via a controlled process - study, manufacturing, control - where quality is the object of all our vigilance.

THE STUDY

- **Office of Studies**

Analyzes your requests and accompanies you in the search for the most suitable solution including choice of material, product development, and prototyping.

- **Economic Optimization**

The study of solutions adapted to your needs integrates both quality factors, time and production costs, thus facilitating economic optimization of your project.

MANUFACTURING

- **The Cut**

Scissors with circular blades and vibrating blades are used for semi-automatic end cutting (unit cut to pattern, mattress format or a template).

- **The Weld**

Made by high frequency welding which guarantees a perfect seal of the assemblies.

- **Properties**

Compatible with cleaning agents, decontamination and disinfection.

CONTROL IN THREE STEPS

1 • Prior inspection of raw materials and tools with verification of design dimensions via our production management software.

2 • Control during the production of physico-chemical parameters by the quality control laboratory and production parameters by the operators.

3 • Control of the finished product

- Sealing control
- Weld control
- Marking allowing the identification of the controlled part for a total traceability.
